1/The erodibility index (EI) is created by dividing potential erosion (from water or wind, whichever is higher) by the T value, which is the rate of soil erosion above which long term productivity may be adversely affected. For more information, see https://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/survey/?cid=nrcs143_014127

2/ Highly Erodible Lands Initiative: Lands with EI >=20.

3/ Non-HELI continuous signup lands may have EI above or below 20; EI is not a criteria for non-HELI lands.

4/ EI is not a consideration for grasslands enrollment.
