## USDA announces details for the upcoming Census of Agriculture

America's farmers and ranchers will soon have the opportunity to be represented in the nation's only comprehensive and impartial agriculture data for every state, county and territory. The U.S. Department of Agriculture (USDA) will mail the 2022 Census of Agriculture to millions of agriculture producers across the 50 states and Puerto Rico this fall.

The 2022 Census of Agriculture will be mailed in phases, starting with an invitation to respond online in November followed by paper questionnaires in December. Farm operations of all sizes, urban and rural, which produced and sold, or normally would have sold, \$1,000 or more of agricultural product in 2022 are included in the ag census.

Collected in service to American agriculture since 1840 and now conducted every five years by USDA's National Agricultural Statistics Service (NASS), the Census of Agriculture tells the story and shows the value of U.S. agriculture. It highlights land use and ownership, producer characteristics, production practices, income and expenditures, among other topics. Between ag census years, NASS considers revisions to the questionnaire to document changes and emerging trends in the industry. Changes to the 2022 questionnaire include new questions

about the use of precision agriculture, hemp production, hair sheep, and updates to internet access questions.

To learn more about the Census of Agriculture, visit [nass.usda.gov/AgCensus](https://nass.usda.gov/AgCensus) or call 800-727-9540. On the website, producers and other data users can access frequently asked questions, past ag census data, [partner tools](#) to help spread the word about the upcoming ag census, special study information, and more. For highlights of these and the latest information on the upcoming Census of Agriculture, follow USDA NASS on twitter [@usda\\_nass](#).

## Five Facts About the United States Drought Monitor

This is likely no surprise to you, but drought persists across the western U.S. and is intensifying in some areas. No geographic area is immune to the potential of drought at any given time. The [U.S. Drought Monitor](#) provides a weekly drought assessment, and it plays an important role in USDA programs that help farmers and ranchers recover from drought.

### **Fact #1 - Numerous agencies use the Drought Monitor to inform drought-related decisions.**

The map identifies areas of drought and labels them by intensity on a weekly basis. It categorizes the entire country as being in one of six levels of drought. The first two, None and Abnormally Dry (D0), are not considered to be drought. The next four describe increasing levels of drought: Moderate (D1), Severe (D2), Extreme (D3) and Exceptional (D4).

While many entities consult the Drought Monitor for drought information, drought declarations are made by federal, [state](#) and local agencies that may or may not use the Drought Monitor to inform their decisions. Some of the ways USDA uses it to determine a producer's eligibility for certain [drought assistance programs](#), like the [Livestock Forage Disaster Program](#) and [Emergency Haying or Grazing on Conservation Reserve Program acres](#) and to "fast-track" [Secretarial drought disaster designations](#).

### **Fact #2 - U.S. Drought Monitor is made with more than precipitation data.**

When you think about drought, you probably think about water, or the lack of it. Precipitation plays a major role in the creation of the Drought Monitor, but the map's author considers [numerous indicators](#), including [drought impacts](#) and local insight from over 450 expert observers around the country. Authors use several dozen indicators to assess drought, including precipitation, streamflow, reservoir levels, temperature and evaporative demand, soil moisture and vegetation health. Because the drought monitor depicts both short and long-term drought conditions, the authors must look at data for multiple timeframes. The final map produced each week represents a summary of the story being told by all the pieces of data. To help tell that story, authors don't just look at data. They converse over the course of the map-making week with experts across the country and draw information about drought impacts from media reports and private citizens.

### **Fact #3 - A real person, using real data, updates the map.**

Each week's map author, not a computer, processes and analyzes data to update the drought monitor. The [map authors](#) are trained climatologists or meteorologists from the National Drought Mitigation Center at the University of Nebraska-Lincoln (the academic partner and website host of the Drought Monitor), the National Oceanic and Atmospheric Administration and USDA. The author's job is to do what a computer can't – use their expertise to reconcile the sometimes-conflicting stories told by each stream of data into a single assessment.

### **Fact #4 - The Drought Monitor provides a current snapshot, not a forecast.**

The Drought Monitor is a “snapshot” of conditions observed during the most recent week and builds off the previous week's map. The map is released on Thursdays and depicts conditions based on data for the week that ended the preceding Tuesday. Rain that falls on the Wednesday just before the USDM's release won't be reflected until the next map is published. This provides a consistent, week-to-week product and gives the author a window to assess the data and come up with a final map.

### **Fact #5 – Your input can be part of the drought-monitoring process.**

State climatologists and other trained observers in the drought monitoring network relay on-the-ground information from numerous sources to the US Drought monitor author each week. That can include information that you contribute.

The Drought Monitor serves as a trigger for multiple forms of federal disaster relief for agricultural producers, and sometimes producers contact the author to suggest that drought conditions in their area are worse than what the latest drought monitor shows. When the author gets a call like that, it prompts them to look closely at all available data for that area, to see whether measurements of precipitation, temperature, soil moisture and other indicators corroborate producer-submitted reports. This is the process that authors follow whether they receive one report or one hundred reports, although reports from more points may help state officials and others know where to look for impacts.

There are multiple ways to contribute your observations:

1. **Talk to your state climatologist** - Find the current list at the [American Association of State Climatologists](#) website.
2. **Email** - Emails sent to [droughtmonitor@unl.edu](mailto:droughtmonitor@unl.edu) inform the USDM authors.
3. **Become a CoCoRaHS observer** - Submit drought reports along with daily precipitation observations to the [Community Collaborative Rain, Hail & Snow Network](#).
4. **Submit Condition Monitoring Observer Reports (CMOR)** - [go.unl.edu/CMOR](http://go.unl.edu/CMOR).

For more information, read our [Ask the Expert blog with a NDMC climatologist](#) or visit [farmers.gov/protection-recovery](http://farmers.gov/protection-recovery).

## **USDA Launches Loan Assistance Tool to Enhance Equity and Customer Service**

The U.S. Department of Agriculture (USDA) launched a new online tool to help farmers and ranchers better navigate the farm loan application process. This uniform application process will help to ensure all farm loan applicants receive equal support and have a consistent customer experience with USDA's Farm Service Agency (FSA) regardless of their individual circumstances.

USDA experiences a high rate of incomplete or withdrawn applications, particularly among underserved customers, due in part to a challenging and lengthy paper-based application process. The Loan Assistance Tool is available 24/7 and gives customers an online step-by-step guide that supplements the support they receive when working in person with a USDA employee, providing materials that may help an applicant prepare their loan application in one tool.

Farmers can access the Loan Assistance Tool by visiting [farmers.gov/farm-loan-assistance-tool](https://farmers.gov/farm-loan-assistance-tool) and clicking the 'Get Started' button. From here they can follow the prompts to complete the Eligibility Self-Assessment and start the farm loan journey. The tool is built to run on any modern browser like Chrome, Edge, Firefox, or the Safari browser, and is fully functional on mobile devices. It does not work in Internet Explorer.

The Loan Assistance Tool is the first of multiple farm loan process improvements that will be available to USDA customers on farmers.gov in the future. Other improvements and tools that are anticipated to launch in 2023 include:

- A streamlined and simplified direct loan application, reduced from 29 pages to 13 pages.
- An interactive online direct loan application that gives customers a paperless and electronic signature option, along with the ability to attach supporting documents such as tax returns.
- An online direct loan repayment feature that relieves borrowers from the necessity of calling, mailing, or visiting a local Service Center to pay a loan installment.

## Background

USDA provides access to credit to approximately 115,000 producers who cannot obtain sufficient commercial credit through direct and guaranteed farm loans. With the funds and direction Congress provided in Section 22006 of the Inflation Reduction Act, USDA is taking action to immediately [provide relief to qualifying distressed borrowers](#) whose operations are at financial risk while working on making transformational changes to loan servicing so that borrowers are provided the flexibility and opportunities needed to address the inherent risks and unpredictability associated with agricultural operations.

---

## Farmers Can Now Make 2023 Crop Year Elections, Enroll in Agriculture Risk Coverage and Price Loss Coverage Programs

Agricultural producers can now change election and enroll in the [Agriculture Risk Coverage \(ARC\) and Price Loss Coverage](#) programs for the 2023 crop year, two key safety net programs offered by the U.S. Department of Agriculture (USDA). Signup began Monday, and producers have until March 15, 2023, to enroll in these two programs. Additionally, USDA's Farm Service

Agency (FSA) has started issuing payments totaling more than \$255 million to producers with 2021 crops that have triggered payments through ARC or PLC.

### **2023 Elections and Enrollment**

Producers can elect coverage and enroll in ARC-County (ARC-CO) or PLC, which provide crop-by-crop protection, or ARC-Individual (ARC-IC), which protects the entire farm. Although election changes for 2023 are optional, producers must enroll through a signed contract each year. Also, if a producer has a multi-year contract on the farm and makes an election change for 2023, they must sign a new contract.

If producers do not submit their election by the March 15, 2023 deadline, their election remains the same as their 2022 election for crops on the farm. Farm owners cannot enroll in either program unless they have a share interest in the farm.

Covered commodities include barley, canola, large and small chickpeas, corn, crambe, flaxseed, grain sorghum, lentils, mustard seed, oats, peanuts, dry peas, rapeseed, long grain rice, medium and short grain rice, safflower seed, seed cotton, sesame, soybeans, sunflower seed and wheat.

### **Web-Based Decision Tools**

In partnership with USDA, the University of Illinois and Texas A&M University offer web-based decision tools to assist producers in making informed, educated decisions using crop data specific to their respective farming operations. Tools include:

- [Gardner-farmdoc Payment Calculator](#), a tool available through the University of Illinois allows producers to estimate payments for farms and counties for ARC-CO and PLC.
- [ARC and PLC Decision Tool](#), a tool available through Texas A&M that allows producers to obtain basic information regarding the decision and factors that should be taken into consideration such as future commodity prices and historic yields to estimate payments for 2022.

### **2021 Payments and Contracts**

ARC and PLC payments for a given crop year are paid out the following fall to allow actual county yields and the Market Year Average prices to be finalized. This month, FSA processed payments to producers enrolled in 2021 ARC-CO, ARC-IC and PLC for covered commodities that triggered for the crop year.

For ARC-CO, producers can view the [2021](#) ARC-CO Benchmark Yields and Revenues online database, for payment rates applicable to their county and each covered commodity. For PLC, payments have triggered for rapeseed and peanuts.

For ARC-IC, producers should contact their local FSA office for additional information pertaining to 2021 payment information, which relies on producer-specific yields for the crop and farm to determine benchmark yields and actual year yields when calculating revenues.

### **By the Numbers**

In 2021, producers signed nearly 1.8 million ARC or PLC contracts, and 251 million out of 273 million base acres were enrolled in the programs. For the 2022 crop year signed contracts surpassed 1.8 million, to be paid in the fall of 2023, if a payment triggers.

Since ARC and PLC were first authorized by the 2014 Farm Bill and reauthorized by the 2018 Farm Bill, these safety-net programs have paid out more than \$34.9 billion to producers of covered commodities.

### **Crop Insurance Considerations**

ARC and PLC are part of a broader safety net provided by USDA, which also includes crop insurance and marketing assistance loans.

Producers are reminded that ARC and PLC elections and enrollments can impact eligibility for some crop insurance products.

Producers on farms with a PLC election have the option of purchasing Supplemental Coverage Option (SCO) through their Approved Insurance Provider; however, producers on farms where ARC is the election are ineligible for SCO on their planted acres for that crop on that farm.

Unlike SCO, the Enhanced Coverage Option (ECO) is unaffected by an ARC election. Producers may add ECO regardless of the farm program election.

Upland cotton farmers who choose to enroll seed cotton base acres in ARC or PLC are ineligible for the stacked income protection plan (STAX) on their planted cotton acres for that farm.

### **More Information**

For more information on ARC and PLC, visit the [ARC and PLC webpage](#) or contact your local [USDA Service Center](#).

---

## **Dairy Producers Can Now Enroll for 2023 Signup for Dairy Margin Coverage**

Dairy producers can now enroll for 2023 coverage through the Dairy Margin Coverage (DMC) Program, an important safety net program from the U.S. Department of Agriculture (USDA) that helps producers manage changes in milk and feed prices. Last year, USDA's Farm Service Agency (FSA) took steps to improve coverage, especially for small- and mid-sized dairies, including offering a new Supplemental DMC program and updating its feed cost formula to better address retroactive, current and future feed costs. These changes continue to support producers through this year's signup, which ends Dec. 9, 2022.

DMC is a voluntary risk management program that offers protection to dairy producers when the difference between the all-milk price and the average feed price (the margin) falls below a certain dollar amount selected by the producer.

So far in 2022, DMC payments to more than 17,000 dairy operations have triggered for August for more than \$47.9 million. According to DMC margin projections, an indemnity payment is projected for September as well. At \$0.15 per hundredweight for \$9.50 coverage, risk coverage through DMC is a relatively inexpensive investment.

DMC offers different levels of coverage, even an option that is free to producers, aside from a \$100 administrative fee. Limited resource, beginning, socially disadvantaged or a military veteran farmers or ranchers are exempt from paying the administrative fee, if requested. To determine the appropriate level of DMC coverage for a specific dairy operation, producers can use the [online dairy decision tool](#).

### **Supplemental DMC**

Last year, USDA introduced Supplemental DMC, which provided \$42.8 million in payments to better help small- and mid-sized dairy operations that had increased production over the years but were not able to enroll the additional production. Supplemental DMC is also available for 2023.

Supplemental DMC coverage is applicable to calendar years 2021, 2022 and 2023. Eligible dairy operations with less than 5 million pounds of established production history may enroll supplemental pounds.

For producers who enrolled in Supplemental DMC in 2022, the supplemental coverage will automatically be added to the 2023 DMC contract that previously established a supplemental production history.

Producers who did not enroll in Supplemental DMC in 2022 can do so now. Producers should complete their Supplemental DMC enrollment before enrolling in 2023 DMC. To enroll, producers will need to provide their 2019 actual milk marketings, which FSA uses to determine established production history.

### **DMC Payments**

Additionally, FSA will continue to calculate DMC payments using updated feed and premium hay costs, making the program more reflective of actual dairy producer expenses. These updated feed calculations use 100% premium alfalfa hay rather than 50%. The benefits of these feed cost adjustments were realized in the recent August 2022 margin payment as current high feed and premium hay costs were considered in payment calculations.

### **More Information**

In addition to DMC, USDA offers other risk management tools for dairy producers, including the [Dairy Revenue Protection \(DRP\)](#) plan that protects against a decline in milk revenue (yield and price) and the [Livestock Gross Margin \(LGM\)](#) plan, which provides protection against the loss of the market value of livestock minus the feed costs. Both DRP and LGM livestock

insurance policies are offered through the Risk Management Agency. Producers should contact their local [crop insurance agent](#) for more information.

For more information on DMC, visit the [DMC webpage](#) or contact your local [USDA Service Center](#).

---

## USDA Updates Farm Loan Programs to Increase Equity

The U.S. Department of Agriculture (USDA) is updating its farm loan programs to better support current borrowers, including historically underserved producers. These improvements are part of USDA's commitment to increase equity in all programs, including farm loans that provide important access to capital for covering operating expenses and purchasing land and equipment.

The 2018 Farm Bill authorized FSA to provide equitable relief to certain direct loan borrowers, who are non-compliant with program requirements due to good faith reliance on a material action of, advice of, or non-action from an FSA official. Previously, borrowers may have been required to immediately repay the loan or convert it to a non-program loan with higher interest rates, less favorable terms, and limited loan servicing.

Now, FSA has additional flexibilities to assist borrowers in such situations. If the agency provided incorrect guidance to an existing direct loan borrower, the agency may provide equitable relief to that borrower. FSA may assist the borrower by allowing the borrower to keep their loans at current rates or other terms received in association with the loan which was determined to be noncompliant or the borrower may receive other equitable relief for the loan as the Agency determines to be appropriate.

USDA encourages producers to reach out to their local loan officials to ensure they fully understand the wide range of loan and servicing options available that can assist them in starting, expanding or maintaining their operation.

### Additional Updates

Equitable relief is one of several changes authorized by the 2018 Farm Bill that USDA has made to the direct and guaranteed loan programs. Other changes that were previously implemented include:

- Modifying the existing three-year farming experience requirement for Direct Farm Ownership loans to include additional items as acceptable experience.
- Allowing socially disadvantaged and beginning farmer applicants to receive a guarantee equal to 95%, rather than the otherwise applicable 90% guarantee.
- Expanding the definition of and providing additional benefits to veteran farmers.
- Allowing borrowers who received restructuring with a write down to maintain eligibility for an Emergency loan.

- Expanding the scope of eligible issues and persons covered under the agricultural Certified Mediation Program.

Additional information on these changes is available in the March 8, 2022 [rule on the Federal Register](#).

### More Background

FSA has taken other recent steps to increase equity in its programs. Last summer, USDA announced it was providing \$67 million in competitive loans through its new Heirs' Property Relending Program to help agricultural producers and landowners resolve heirs' land ownership and succession issues. FSA also invested \$4.7 million to establish partnerships with organizations to provide outreach and technical assistance to historically underserved farmers and ranchers, which contributed to a fourfold increase in participation by historically underserved producers in the Coronavirus Food Assistance Program 2 (CFAP 2), a key pandemic assistance program, since April 2021.

Additionally, in January 2021, Secretary Vilsack announced a [temporary suspension of past-due debt collection and foreclosures](#) for distressed direct loan borrowers due to the economic hardship imposed by the COVID-19 pandemic.

Producers can explore available loan options using the [Farm Loan Discover Tool on farmers.gov](#) (also available in Spanish) or by contacting their local [USDA Service Center](#). Service Center staff continue to work with agricultural producers via phone, email, and other digital tools. Due to the pandemic, some USDA Service Centers are open to limited visitors. Producers can [contact their local Service Center](#) to set up an in-person or phone appointment to discuss loan options.
