MYA Price=national average price received by producers during the 12-month marketing year.

Effective reference price (column E), see Table 2.

1/ F= Final MYA prices--Source: National Agricultural Statistics Service (NASS), Agricultural Prices on the publishing dates listed under column C. MYA prices for commodities without scheduled publishing dates are generally published near the end of the noted month. P=Projected MYA prices--Source: USDA's World Agricultural Supply and Demand Estimates or Interagency Commodity Estimates Committee Minutes.

2/ The annual benchmark price equals the higher of the effective reference price or the respective MYA price and is used to compute annual ARC-IC benchmark revenues. The ARC-IC benchmark revenue equals the 5-year average of the annual benchmark revenues, excluding the high and low revenues. The ARC-IC revenue guarantee equals 86% of the ARC-IC benchmark revenue. Highlighted prices note when the effective reference price replace MYA price.

3/ The actual ARC-IC price equals the higher of the: (a) 2022/23 MYA price (column K), or (b) 2022 national average loan rate (column L). The actual ARC-IC prices are multiplied by the actual ARC-IC yields and used to determine the ARC-IC actual revenue. The ARC-IC payment rate equals the average ARC-IC revenue guarantee weighted by plantings minus the average ARC-IC actual revenue weighted by plantings, but cannot exceed 10% of the benchmark revenue.

4/ Seed cotton price is a weighted average of upland cotton and cottonseed prices.

5/ Excludes temperate japonica rice.
